Piezometer Installation

In Situ Permeability

The renewed Minnie travels to site on her own truck. Legal size and mass. No permits needed.

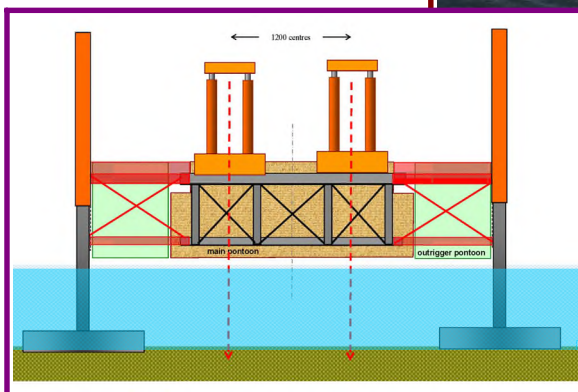

She self-unloads and assembles on site. No outside crane hire is needed.

She self-launches on her own removable wheels down a boat ramp or suitable surface.

She can test and sample now in up to 6m water depth. Held down by suction feet.

She has twin 150kN capable "pushers" to permit any IGS testing and sampling at a single set-up.

**reducing geotechnical uncertainty**
