Seismic Dilatometer

Vane Shear

Tee-Bar

Piston & Eziprobe Sampling

PPI Piston Sampling

Piezometer Installation

In Situ Permeability

how cool is this !!!!

Introducing "Mudskipper"

our new amphibious sampling rig

across a mud flat where you can hardly walk

track pressure is 6-7 kPa ie <1 psi

can sample in up to 1.4m water depth

across the water - to the other side

an innovative stainless steel sampler that shakes, sucks and blows

sampling is a breeze

samples are uncontaminated and un-oxidised

samples are extruded into vacuum sealed bags

reducing geotechnical uncertainty
